ADVANTAGES OF THE CONTACTLESS MULTI-CURRENCY FOREXCARD

Enhanced Security

The payWave technology was high-security VISA standards and the same secure technology as other Chip cards. In addition, you remain in control of your card during the entire transaction, further reducing the risk of fraud.

1. Ultra short range—generally less than 4 cm.
2. The payWave card has its own, unique, built in, secret key, which is used to generate a unique code for every contactless transaction
3. Every payWave Card transaction is authorized securely.
4. The power and global reach of the VisaNet system to help prevent fraudulent transactions.

Please note that for a payWave payment to take place, a retailer must enter the payment amount in order to activate the contactless reader. You then need to place the card close to the reader for the transaction to complete. This means that multiple contactless payments cannot be made without knowledge. In addition, as the payWave transactions are processed the same way as all other Card purchases, the VISA network monitors, so any suspicious activity can be identified quickly. All Visa payWave readers are designed only to perform one transaction at a time. As a safeguard, each transaction must be complete or cancelled before another one can take place.
