Scenario 2: Death at the end of 3rd policy year

In case of death in 3rd year (after payment of 3 Premiums, but just before payment of 4th Premium), the death benefit paid will be calculated as under:

Death Benefit is higher of:

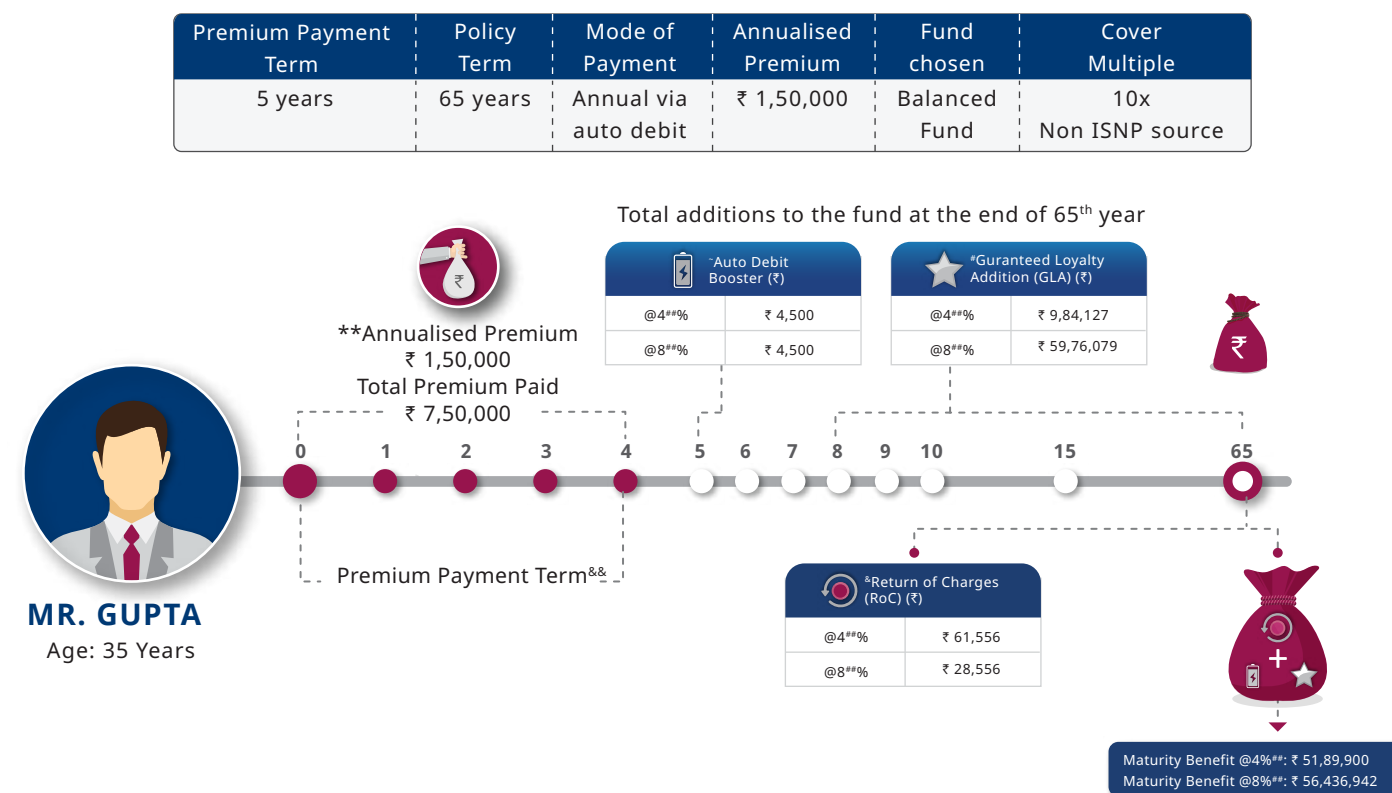

1. Sum Assured – ₹ 25,00,000
2. 105% of all premiums paid – ₹ 7,87,500
3. Fund Value {as on the date of intimation of death}* : @8% - ₹ 7,55,534; @4% - ₹ 7,00,414

Death benefit of ₹ 25,00,000 is paid to the nominee.

*Expected Fund Value of Balanced Fund, the Fund Value denoted above in year 3 (Before payment of 4th premium); this might be different depending on exact date of death of Life Insured. Fund Value will be calculated as per the prevailing NAV as on the date of death.

Example 2:

Investment strategies

Under Flexi Wealth Advantage Plan, you have a range of 5 investment strategies to choose from. You may choose only one of the five available investment strategies and there is no extra cost applicable for your choice made.

While one of these is a self-managed strategy which lets you choose any of the fund(s) in any proportion and the other four are automated strategies which let you have a hassle-free portfolio rebalancing based in a set and defined manner.

Self-Managed Portfolio Strategy

A strategy wherein your money will be allocated in your choice of fund(s).

Systematic Transfer Plan (STP)

An option which replicates a rupee cost averaging method by systematically moving your money from a debt to equity fund every month. The premium received net of charges shall be allocated first to Secure Plus Fund. Immediately thereafter and on each subsequent monthly anniversary, units available in Secure Plus Fund will be systematically transferred to Growth Super Fund based on the formula: $[1 / (13 - \text{month number in the policy year})]$.

Lifecycle Based Portfolio Strategy

An option to manage your funds by creating a balance between an equity and a debt fund of your choice through systematic allocation based on your changing age.

Trigger Based Portfolio Strategy

An event based strategy that helps you in 'Securing your Gains'. The premium will initially be distributed between an equity and a debt fund chosen by you, in a 75%: 25% proportion. Your portfolio will be re-balanced and funds will be re-allocated based on a pre-defined trigger event at every monthly anniversary of the policy.

Dynamic Fund Allocation (DFA) strategy

A standardized approach for striking the right balance between debt and equity by rebalancing your portfolio basis years to maturity remaining in your policy. The funds shall be maintained amongst Growth Super Fund and Secure Fund in a pre-defined proportion that changes depending upon the years left to maturity as per a matrix.
